

ABSTRACT

An electronic device testing apparatus for conducting a test by pressing input/output terminals of electronic devices to be tested (20) against contact portions (110a) of a test head (110) while holding the electronic devices to be tested (20) on electronic device conveying media (11, 12, 13): wherein the electronic device testing apparatus comprises a test head (100) provided with a plurality of contact groups (111, 112, 113) made by sets of contact portions (100a), and a plurality of moving means capable of controlling independently from each other; and the respective moving means move the electronic device conveying media (11, 12, 13) loaded with the electronic devices to be tested (20) to corresponding contact groups (111, 112, 113) to conduct a test.
